EXPERIENCE

Senior Engineer | E4WebSolutions
January 2010 - Present

- Numerous web related projects for a wide variety of clients
- Mostly LAMP based
- Countless Wordpress plugins and customizations
- Several fully custom web applications
- Focus on dynamic web, Strong HTML5, JS/JQuery, CSS, Ajax, etc.
- Server / Cloud / MySQL admin

CTO | Coupon Cabin
January 2005 - December 2010

- Built custom internal systems for collection/management/publishing of company data
- Custom production systems to collect data from variety of internal and external sources which is then searchable by end users to find source, offers, and discounts (very much a big data project, terabytes of data sifted in real time then combined with discount offers from main site using proprietary)
- Built, managed, maintained, synched, load balanced multiple servers in 3 data centers (actual hardware I configured and installed in rented rack space) combined with on-demand cloud instances during load peaks

Self Employed
January 1995 - 2005

- Numerous web related projects for a wide variety of clients
- 4 Year contract with manufacturing company
  - CNC machine install/repair/coding
  - AutoCAD design to GCode translation
  - Automated custom CNC production system (Web based ordering system->GCode creation->CNC machine dynamic production)

Special Projects Engineer | Palmer Wireless / AT&T
January 1990 - December 1995

- Basically in charge of any projects that affected both IT department and [Cellular/Phone] Engineering
- Cisco CNE, Nortel phone switch tech courses
- Installed regional Cisco network backbone
- Converted regional X.25 packet network to TCP/IP on Cisco
- Beta site for Nortel IP on cell phones (CDPD)
- In charge of fraud management system and integration with switching and billing systems

Network Systems Engineer | Chicago Research and Trading
January 1986 - December 1990

- Systems and network programming for highly automated arbitrage firm
- C/C++ systems programming on multiple platforms
- Created real time Netware server mirroring / hot swap
- Created seamless multi-platform file transfer / synch software (PC/Netware, HP/Apollo Domain OS, Data General)
- HP/Apollo DomainOS [Unix] OS Internals course
- Built Comprehensive Systems/Network/Application monitoring system

SYNOPSIS

I have been in this industry for a very long time. Longer than I sometimes care to admit. However this also gives me a vast amount of experience solving problems for many industries as well as understanding client needs. Challenges and variety are more important to me than money..

PLATFORMS

Unix, Linux, Windows. Mac.
You name it I have probably worked with it. Recently it has been mostly LAMP based (Hardware+systems admin as well as coding), with a mix of mobile (Android+IOS) and windows.

LANGUAGES

Current: PHP, MySQL, Javascript/JQuery, CSS, HTML, Shell, Python, Java, Swift

Strong but outdated: C/C++. Several dialects of BASIC.

Many, Many others. See below.
